1 Ikelite DS125 Complete Strobe
(non-working strobe – repair or use for spares)
Strobe modeling light bulbs
Multiple Complete O-Ring Sets
Critical & noncritical components & spares too numerous to list

You will look like a Pro when you step on the boat with this complete, turn-key underwater camera system. Showing only the affectionate paint wear typical of professional housings, all of these components have been meticulously maintained and are in like-new condition.

This is a complete turn-key package, ready for immediate travel ... all you need to do is inventory the components and add your own lenses. When new, this complete system cost over \$20,000, and this amount does not include the value of the spares, the cost of which can add up quickly.

The spare components are a huge bonus... you do not want to end up on a liveaboard half way around the world only to have the failure of an inexpensive part keep you from using your housing! Rarely needed, the spares give you a comfort level and insure you will always have the use of your system on an expensive dive trip. With extra strobe batteries, you will always have fully charged batteries. You can use one camera body for the housing and another for topside shots... always having a spare for the housing if needed.

Another big plus are the ULCS bar and buoyancy arms. This system includes a complete set of both long and short arms that can be configured in any number of ways, even asymmetrically! You can configure the arms any way you want to achieve perfect balance and buoyancy characteristics. You will only need to do this one time and then set it up the same way for any given configuration (my personal preference is lateral balance and slightly negative buoyancy for stability).

This package includes original user's manuals and many accessories and spares to numerous to list. Please see the associated pictures taken with this system.

NOTE! Buyer pays or arranges shipping/delivery from Myrtle Beach, South Carolina
